

# INNOVATION HUB

Appleton (Tech) Road, University of Ibadan

discover.

design.

develop.

deliver.

# we are

The first of its kind, strategically located in the University community, the LPI Hub is an inspiring place for students, professionals, and organisations across various fields of endeavor to meet, discover talent, design and develop innovative solutions, processes, services and products that have a far-reaching impact.

The atmosphere here is ideal for collaborative work, conferences, meetings, small-to-moderately-large events of different formats.

With a network of professionals from the Bay Area to the isles of Australia, connections with the Linux Professional Institute, core open-source tech, a big-data analytics company, and close links to multi-disciplinary professionals and experts doing amazing work and cutting-edge research, unique opportunities are available to Hubbers through this platform - in research, building patented products.

# The Tux Research & Make Lab

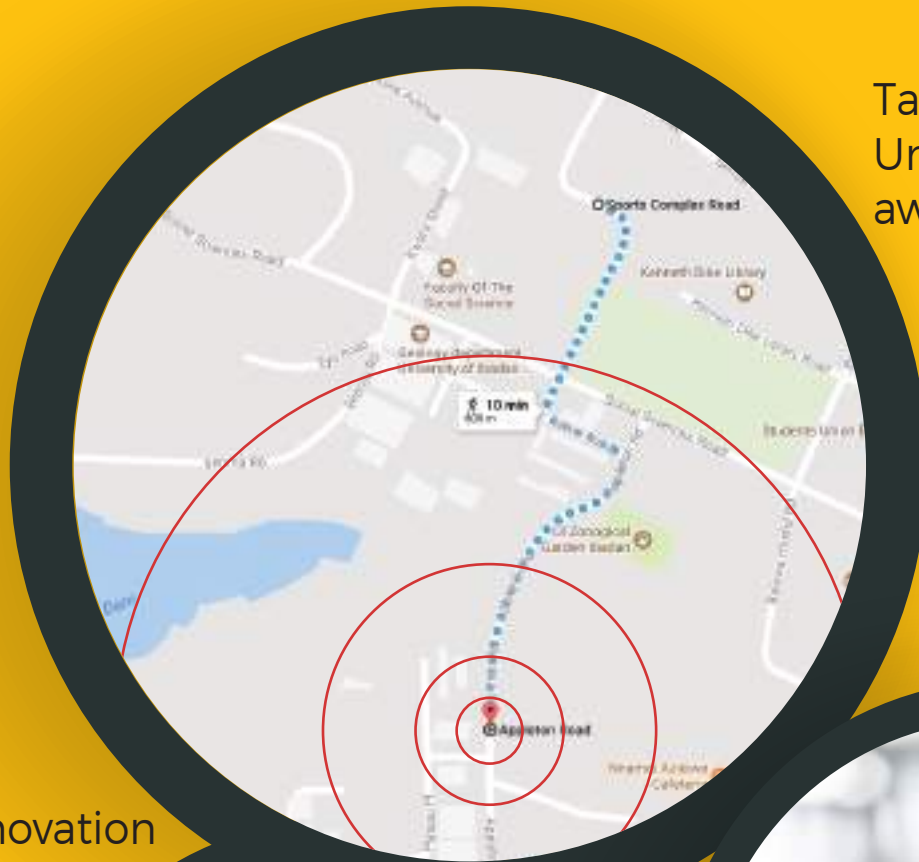

We are committed to strengthening the role of research in the University community and beyond. We, therefore, offer vital support in the initial stages of creative processes through a research-based approach.

With the assistance of field experts, you can develop a prototype, do virtual testing and build an actual, working, 3D model within the lab.

An exciting part to being a part of the lab is that, beyond creating, you can go on to patent what you have created!

Because our lab emphasizes on experimentation and interdisciplinary collaboration that leads to new processes and innovative works, science and art-based ideas can find expression here and give birth to a wide range of possibilities, from improved nanobots to textiles for high fashion.

Take up a regular sport activity at the University Sports Centre, 10 minutes away from the LPI iHub

your creative innovation could be in this spot

Charge your brain with superfoods from our outdoor cafe
